5-fold CV accuracy	62%
Macro F1	0.62
Majority baseline	46%

Predicts Kids / Older Kids / Teens / Adults from metadata only (rating excluded to avoid leakage). Best on Kids, weakest on Teens and Older Kids.

Key recommendations

- Plan for a flat-to-modest band of about 1,700–2,400 additions a year; volume has plateaued.
- Keep investing in Japan, South Korea and France; review India, whose additions fell 15%.
- 67% of series have a single season: use viewing data to guide renewals.
- Use the audience model as a triage tool with human review for unrated titles.

Source: provided Netflix titles file (8,786 titles after cleaning). No viewing, cost or revenue data, so insights describe catalogue composition, not viewer demand. Filters apply to the first four panels.
